# My Code: Hello World!

By Kelly (feat.ChatGPT3, Sporky.ai)

One by one, I code.
Piece by piece, my coding's a mess.
My first coding experience.

One by one, I code.
Piece by piece, my coding's a mess.
It's even ugly to look at.

Eight years since I enrolled in Harvard's coding course.
Aging with Professor David Malan.

What's so special about "Hello World, Hello World"?
Fooled by those words for eight years now.

One by one, I code.
Piece by piece, my coding's a mess.

Finally succeeded in printing "Hello World!"
Then came the first assignment, to manage llama's population.
Panic. Why should I manage llama's population?

One by one, I code.
Piece by piece, my coding's a mess.
Almost gave up, but continued.

One by one, I code.
Piece by piece, my coding's a mess.

I'll never forget the feeling of submitting the assignment and receiving a 100% grade.
I searched on YouTube. The answers were there.
I copied them.

One by one, I code.

Piece by piece, my coding's a mess.

Coding is just copying and pasting, they say.

But what do I copy? Where do I find it? Where do I paste it?

One by one, I code.

Piece by piece, my coding's a mess.

Then ChatGPT appeared.

I asked, and it answered.

I copied and pasted the solution.

One by one, I code.

Piece by piece, my coding's a mess.

I know my coding is a mess because I pieced it together.

But when I get the result I want, I want to feel that happiness again.

Yeah, let's learn Python next.

Hello World!

This is CS50!

Thank you.
